UNIVERSITY

1

## Course Administration

- Instructor
  - Jorge Valenzuela
    - Office: DUE 2172
    - Office Hours: M & W 1:30 - 3:00pm, or by appointment (jvalenzu@ksu.edu)
    - *Include in subject:* **CIS308**
- Teaching Assistant:
  - Check Canvas for TA's info

© Copyright 2021 Jorge Valenzuela. All Rights Reserved

**KANSAS STATE**  
UNIVERSITY

2

## Course Administration

- Grade
  - Lab Activities (20%)
  - Programming Projects (40%)
  - Exams 1 (15%)
  - Exams 2 (15%)
  - Finale Exam (10%)

© Copyright 2021 Jorge Valenzuela. All Rights Reserved

KANSAS STATE  
UNIVERSITY

3

## Course Administration

- Uploading files to Canvas
  - `lastNameInitialFirstName_assignmentShortName.xxx`
    - Where assignmentShortName can be:
      - L01 (lab 1)
      - P03 (Project 3)
    - Example:
   
`ValenzuelaJ_L3.zip`

UNIVERSITY

4

## Course Administration

- **Class Dynamics:** Nothing is Random in the class
  - My goals are:
    - To facilitate the acquisition of a literacy, in this case, C programming.  
<prepare-listen-act>
    - To create a class environment where you feel safe so you can take risks (*ignite* learning). <respect-3D>
    - To nurture your love for knowledge.  
<independent-collaboration>

UNIVERSITY

7

## Course Administration

- CLion
  - Hello World!

```
#include <stdio.h>
int main() {
    printf("Hello World!\n");
    return 0;
}
```

# CIS308

## Starting with C

© Copyright 2021 Jorge Valenzuela. All Rights Reserved

**KANSAS STATE**  
UNIVERSITY

9

## Starting with C

- What's C?
  - High-Level Programming Language
  - Developed by Dennis Ritchie at Bell Labs in the mid 1970s
    - Programming Language
      - Not intended for human communication
    - High-Level
      - Basic, C, C++, Java, etc

© Copyright 2021 Jorge Valenzuela. All Rights Reserved

**KANSAS STATE**  
UNIVERSITY

10

## Starting with C

High-Level Language	for i = 1; i < lim; i++
Assembly Language	mov 0x15, r1
Machine Language	1001 0011 1101 1111
Hardware	0V, 5V, 3.2V, etc.

© Copyright 2021 Jorge Valenzuela. All Rights Reserved

KANSAS STATE  
UNIVERSITY

11

## What's C?

- Programming paradigms
  - Imperative programming
    - C, Pascal
  - Functional programming
    - Ocaml, Haskell
  - Object Oriented Programming (OOP)
    - C++, C#, Objective C, Java,
- We will be learning C

© Copyright 2021 Jorge Valenzuela. All Rights Reserved

KANSAS STATE  
UNIVERSITY

12

## What's C?

- Interpreted
  - Java is compiled into bytecodes that is interpreted by the Java Virtual Machine (JVM)
- Compiled
  - C is compiled into a machine specific executable

KANSAS STATE  
UNIVERSITY

13

## C program anatomy

1 Documentation

```
/* My first C program */
/* Author: Jorge Valenzuela */
```

2 Preprocessor instructions

```
#include <stdio.h>
```

3 Function prototypes

```
void displayMenu();
```

4 Global variables

```
int globalVar;
```

5 Program execution entry point

```
int main() {
    int x, y;
    printf("Hello World\n");
    displayMenu();
    return 0;
}
```

6 Function Call

7 Function implementation

```
void displayMenu() {
}
```

**KANSAS STATE**  
UNIVERSITY

15

## C program anatomy

**preprocessing directive** → `#include <stdio.h>` ← **System library**  
**Function implementation** ← **library file to include**

**Return type** → `int` **Begin of function block** → `main() {`

**Call the function print with some parameters** → `printf("Hello World\n");`  
 ← **const \*char parameter**

**Return value of function main** → `return 0` ← **Escape character for new line** (pointing to `\n`)

**End of function block** → `}`

**KANSAS STATE**  
UNIVERSITY

16

## C Basics

- Variables (and operations)
- Printing to console
- User input
- Statements and Expressions
- Selection structures
- Loops
- Functions

© Copyright 2021 Jorge Valenzuela. All Rights Reserved

KANSAS STATE  
UNIVERSITY

17

## C Basics

- Variables
  - `type name;`
  - `int`
  - `double`
  - `float`
  - `char`
- Where to declare vars
  - At the beginning of the block
- Variables (arithmetic op)
  - `+, -, *, /, and %`
  - `++, --`
  - `+=, *=`

© Copyright 2021 Jorge Valenzuela. All Rights Reserved

KANSAS STATE  
UNIVERSITY

18

## Var Scope

```
int increment= 10;
int even = 0;
```

←

Global

```
int readInput();

int main() {
    int inNum = readInput();
    if(even) {
        printf("You entered %d, but we incremented to: %d\n", inNum/increment, inNum);
    } else {
        printf("You entered %d\n", inNum);
    }
    return 0;
}

int readInput() {
    int num;
    printf("Enter a number: \n");
    scanf("%d", &num); getchar();
    if(num % 2 == 0) {
        even = 1; // true
        num = num * increment;
    }
    else {
        even = 0; // false
    }
    return num;
}
```

←

19

## C Basics

- Printing and reading variables
- You need `#include <stdio.h>`

```
...
scanf("Enter student's name: %s", &name);
scanf("Enter student's grade: %d", &grade);
printf("%s grade is: %d", name, grade);
...
```

Type	Control String
int	%d
double	%lf
float	%f
char	%c
char*	%s

© Copyright 2021 Jorge Valenzuela. All Rights Reserved

20

## C Basics

- Add to your Hello world program:

```
float  x = 3.141592653589793238;
double z = 3.141592653589793238;
printf("x=%f\n", x);
printf("z=%f\n", z);
printf("x=%20.18f\n", x);
printf("z=%20.18f\n", z);
char letter = 'A'
int val = (int) letter
// Use printf() to print the letter A and
// its ASCII value (val)
```

© Copyright 2021 Jorge Valenzuela. All Rights Reserved

KANSAS STATE  
UNIVERSITY

21

## C Basics

- User Input
  - **getchar()**; // takes no arguments and returns the very next character in the standar input stream.
  - **scanf(...)**; // allows us to read formatted input.

```
#include <stdio.h>
char grade;
printf("Enter your grade: ");
grade = getchar();
printf("Your grade is %c\n", grade);
```

© Copyright 2021 Jorge Valenzuela. All Rights Reserved

KANSAS STATE  
UNIVERSITY

22

## C Basics

- User Input

```
#include <stdio.h>
int num1;
double num2;

Printf("Enter an int and a double: "\n);
scanf("%d-%f\n", &num1, &num2);
getchar();
```

© Copyright 2021 Jorge Valenzuela. All Rights Reserved

KANSAS STATE  
UNIVERSITY

23

## C Basics

- Selection Structures

- If, if-else, if-else if- else,...

```
int age = 7;
if(age < 13){
    printf("Child\n");
} else if (age > 12 && age < 19) {
    printf("Teenager\n");
} else { printf("Adult\n");
```

© Copyright 2021 Jorge Valenzuela. All Rights Reserved

KANSAS STATE  
UNIVERSITY

24

## C Basics

- Selection Structures

- switch-case statements

```
int grade = 'A';
switch (grade) {
    case 'A':
        printf("Excellent");
        break;
    case 'B':
        printf("Good");
        break;
    default:
        printf("Need to put more effort.");
}
```

© Copyright 2021 Jorge Valenzuela. All Rights Reserved

KANSAS STATE  
UNIVERSITY

25

## C Basics

- Loops

- while loop
- do-while Loop
- for loop

```
char c= ' ';
printf("Type some text: ");
while(c != EOF) {
    c = getchar();
    printf("%c\n", c);
}
```

© Copyright 2021 Jorge Valenzuela. All Rights Reserved

KANSAS STATE  
UNIVERSITY

26

## C Basics

- do-while Loop

```
char c;
printf("Type some text: ");
do {
    c = getchar();
    printf("%c\n", c);
} while(c != EOF);
```

© Copyright 2021 Jorge Valenzuela. All Rights Reserved

KANSAS STATE  
UNIVERSITY

27

## C Basics

- for loop

```
int i, num;
int factorial = 1;
printf("Enter a positive integer: ");
scanf("%d", &num);
for (i = 0; i <= num; i++) {
    factorial *= num;
}
printf("%d\n", factorial);
```

© Copyright 2021 Jorge Valenzuela. All Rights Reserved

KANSAS STATE  
UNIVERSITY

28

## C Basics

- Function prototypes // Declaring the function's signature

```
int max(int num1, int num2); // or
int max(int, int);
```

- Include the function prototype before using it
- Do not implement it. (end it with a ;)
- Use `void` if the function will not return a value
- You don't have to include the parameters name
- If no parameters... specify `void`... `funName(void)`

© Copyright 2021 Jorge Valenzuela. All Rights Reserved

KANSAS STATE  
UNIVERSITY

29

## C Basics

- Function implementation

```
int max(int num1, int num2) {
    if(num1 >= num2) return num1;
    else return num2;
}
```

- Calling a Function

```
int big;
...
big = max(5, 10);
```

© Copyright 2021 Jorge Valenzuela. All Rights Reserved

KANSAS STATE  
UNIVERSITY

30

## Lab Activity

- Get a 'base' and a 'power' as user input
- If either number is  $< 0$ , print error
- If both number are 0, print error
- Otherwise, print result of  $\text{base}^{\text{power}}$
- Put calculation in a separate function
- Make the function recursive (doing one multiplication operation each time)
